SUMMARY OF FINDINGS

Introduction: scope and methodology

As a part of its strategy, UFI is developing its Research activities (for a complete overview of UFI activities, please look at www.ufi.org).

An important step is now reached with this study focusing on the "hardware" of the Exhibition Industry. The objective was to identify all venues¹, worldwide, with a minimum of 5,000 sqm of indoor exhibition space².

The data collection, initiated with information available from national associations, key operators and documentation (trade media, industry directories, etc.), was cross checked and enriched with direct information from the venues. Please refer to the list on the previous page for all organizations and individuals who contributed.

The results are therefore considered reliable. They cannot however be considered as 100% accurate or complete, especially when dealing with developments planned until the year 2010 and UFI cannot be held responsible for errors or any consequences arising from the use of this information.

Main results

1,062 venues (with a minimum of 5,000 sqm of indoor exhibition space) were identified for the year 2006 and their total indoor exhibition space reaches 27.6 million sqm.

Europe and North America, followed by Asia offer the highest venues capacities, with respectively 44%, 34% and 12% of the total number of venues, and 52%, 26% and 14% of the total indoor exhibition space (cf. table 1 for complete results and mapping of regions).

The size of venues also varies from one region to another (the average size reaches around 30,000 sqm in Europe and Asia, 20 to 25,000 in North America, Central & South America, the Middle East and Africa, and 16.000 in Oceania). 47 venues – 35 of them being in Europe – have an indoor exhibition space of 100,000 sqm and more (cf. tables 2 & 3).

In terms of countries, 5 of them (USA, Germany, China, Italy and France) account for 58% of the total world indoor exhibition space (cf. table 4 for the capacity details of the 30 countries with a minimum of 100,000 sqm of indoor exhibition space).

The exhibition space will expand in the coming years, with an overall development estimated at 3.5 million sqm identified for the 2007-2010 period (+13% with 2006) for a total expenditure estimated at around 13.5 billion \in (18.7 billion US\$)³.

This level can be considered as a minimum, since some projects, for which space details or deadlines were not fully validated, were not taken into account.

¹ "Venue" definition (for the purpose of this survey): any public assembly premises with a minimum of 5,000 square meters (sqm) of indoor Exhibition Space and that hold various types of exhibitions, trade fairs or consumer/public shows on a regular basis. The premises may be purpose-built exhibition centre space or other premises including Exhibition Space (e.g. hotels, arenas, sport venues, and amusement fair grounds).

² "Exhibition Space" (for the purpose of this survey): the amount of gross exhibition space in the Venue regularly marketed and rented/licensed/used for exhibitions, trade fairs or consumer/public shows.

³ This estimation relates to construction costs only and it represents a minimum amount since some projects, not yet confirmed, were not taken into account in the study.

Europe will account for 52% of this total additional indoor exhibition space, with 99 projects precisely identified. 21% will be in Asia (28 projects), 17% in North America (44 projects) and 7% in the Middle East (10 projects).

As a result, the regional shares of the total world indoor exhibition space won't change much (cf. table 5 for complete regional results).

However, some countries will largely increase their exhibition space. This is the case especially (cf. table 6 for the "top 10" countries in 2010, in terms of indoor venue capacity and table 7 for the largest venue capacities by year 2010, in each of the 4 main regions):

- in Europe: for the Western part of Russia (with around 463,000 additional sqm between years 2006 and 2010, corresponding to a +103% progression), Spain (+240,000 sqm, +18%) and Italy (+215,000 sqm, +10%);
- in North America: for the USA (+469,000 sqm, +8%) and Mexico (+80,000 sqm, +22%);
- in Asia: for China (+445,000 sqm, +18%), India (+79,000 sqm, +33%), South Korea (+65,000 sqm, +41%), Singapore (+54,000 sqm, +35%); and
- in the Middle East, mainly for the UAE (+147,000 sqm, +115%).

By year 2010, it is anticipated that there will be a minimum of 1,104 venues (with a minimum of 5,000 sqm of indoor exhibition space) totalising 31.1 million sqm of indoor exhibition space (cf. table 8 for detailed regional results).

Conclusion

The exhibition space is still expanding, proving the strength of the exhibition industry. However, the overall 2006-2010 rhythm of development (13% anticipated at this stage) may be less significant than it has been in the recent years.

The Western European countries (collectively leaders in terms of total capacity and size of venues) and the US are still developing their capacities, whereas some market adjustments will happen in Asia and Central & Eastern Europe, where some current obvious under capacity situations are about to disappear, or diminish. Russia, and Moscow especially, will become an important player.

The Middle East region is booming, with a global space increase of 38%, which will also lead to an average size of venues getting close to the ones in Europe or Asia.

These trends also tend to prove the existence of a fierce competition, both locally and internationally, with a "development race" often justified by operators with:

- the need to enlarge facilities to keep the growing shows from moving;
- the growing awareness by local authorities of the benefits of the industry, both in terms of direct and indirect economic impact; and
- the coexistence of various economic models and financial expectations.
